

Density and Weight of Lignia Solidwood

Technical Note: LIG01405

Date of Issue: February 2009

Density

Density is one of the most important properties when considering hardwood as greater density corresponds to improved strength and durability. Lignia™ is subject to an extensive quality control program to make certain it leaves the factory at a density that ensures superior performance and long term durability.

Table shows density and weight of coloured Lignia™

Sample		Density kg/m ³
1	Lignia	711
2	Lignia	654
3	Lignia	672
Mean		679
